BT

BT Redcare Agile

cost-effective protection

Just because you have an alarm system installed, it doesn't mean you're fully protected. Bells may be ignored and wires damaged or cut.

BT Redcare Agile doubly protects because it uses two signalling paths. If either is tampered with by an intruder, or develops a fault, the alarm receiving centre will be alerted and the relevant emergency services or your authorised keyholder, can be called without delay.

How secure do you want to be?

Different types of alarm systems offer different levels of protection:

• 'Bells only' – as the name suggests, this is an alarm bell which will ring for up to 20 minutes and which may be ignored.

• Digital communicator – is where your alarm system is connected to an alarm receiving centre via a dedicated phone line. When an alarm is triggered, the alarm receiving centre receives notification and calls the relevant emergency service. A dedicated phone line is usually needed, meaning additional annual rental costs. Should this line be cut or get damaged it may not be immediately detected.

• Dual-signalling paths – uses intelligent technology to actively check that your phone line is working and to detect any problems. It has the back-up of two paths and is capable of sending a 'confirmed activation' to ensure response from the emergency services, even if the telephone line is cut or damaged.

'One third of firms suffered a disruption from trading as a result of crime committed against them. A further 10% have lost business due to crime consequence. A quarter of firms have seen insurance costs increase and staff morale is also damaged.'

The British Chambers of Commerce, Crime against Business Survey 2004

How BT Redcare Agile works

BT Redcare Agile gives you flexibility, allowing you to use GPRS (mobile technology) with the added protection of any standard telephone line as a back-up path. If either is interfered with by an intruder, the other continues to monitor for any further alarms and transmits them as 'confirmed activations' – extra confirmation that an intruder is on the premises and that the alarm isn't false. A 'confirmed activation' attracts immediate response from the emergency services.

BT Redcare Agile is ideal for small businesses and homes.

Peace of mind, 24/7

BT has been a market leader for 20 years in the security market and is a leading supplier of alarm signalling services in the UK. We work closely with the insurance industry to ensure our products and services have its full backing.

BT Redcare Agile conforms to the latest police policies (ACPO and ACPOS). It fully complies with European Standards for alarm signalling up to Grade 2, which is a medium level of protection.

Buying and installing BT Redcare Agile is straightforward – you simply need a telephone line. Always use an approved alarm installer registered with a recognised trade association, such as the NSI (National Security Inspectorate) or SSAIB (Security Systems and Alarms Inspection Board). A check on the availability of a suitable GPRS radio signal will be necessary and will be carried out by your installer.

Our helpline and website can help you find your nearest installer.

BT Redcare Agile – approved protection

- BT – a company you can rely on

- Alerts alarm receiving centre within seconds

- Works for you every second of the day, 365 days of the year

- No call charges on the primary GPRS path

- When used, BT phone line calls charged at national rate
