

BRAMAH

SD 27 Sliding Door Deadlock

Lock Features

The locks strength comes from its action of the hardened 'pins' on the forend of the lock engaging in the 'sockets and bullets' on the locking plate. All important parts are hardened and the straight fixing through the forend and locking plate is supplemented by the extra fittings at right angles. Hardened bolt to resist cutting also side and end pressure attack. Hardened plates fitted to the lock for protection against drilling. Anti picking devices. Suitable for either hand of door. Can be supplied with micro-switch for SD.17A and SD.17GA models. Adaption for fitting to collapsible gates.

Locks in this Range

SD.17 — SD.17A — SD.17G —
SD.27G — SD.17GA.
